Tutorial No. 1

Q. 1 Write the limitations of Bohr's theory?

→ The limitations of Bohr's model are,

- ① The Bohr atomic model theory made correct predictions for smaller sized atoms like hydrogen but poor spectral predictions are obtained when larger atoms are considered.
- ② It failed to explain the Zeeman effect when the spectral line is split into several components in the presence of a magnetic field.

Q. 2 Explain Fajan's Rule?

→ The trend of attaining covalent character by ionic compounds as a consequence of polarisation may be generalized in terms of Fajan's Rule.

According to this rule an ion will be formed most easily when

1. The electron structure of the ion is stable,
2. The charge on the ion is small,
3. A small atom forms the anion and a large atom forms the cation.

If these conditions are not fulfilled, covalent character will develop in the compounds concerned. Thus, increased covalence is favoured by

1. High charge on the ions.
2. Small size of cation and large size of the anion.
3. Cations with 18-electron structures.

Q.3

Define the term Bond order.

Bond order is defined as one half of the difference between the number of electrons present in the bonding and anti-bonding orbitals of a molecule. if N_b is equal to the number of electrons in a bonding orbital, then N_a is equal to the number of electrons in an anti-bonding orbital. Bond order = $\frac{1}{2}(N_b - N_a)$

Q.

Q.1 Write the Application of Fajans rule?

→ The smallest anion and the largest cation should be the most ionic therefore CsF should be the most ionic. therefore these are arranged in the increasing order of covalency. The cation is the same as compared to the anions. Larger the size amongst the anions, larger the size amongst the anions. Larger the size amongst the anion more would be the covalency.

Q.2 Write the statement of Fajans rule?

→ According to Fajans rules of polarization, more the size of anion, more easily it will be polarized and hence, the compound will be more covalent.

less the size of cation, more will be its polarizing power and hence, compound will be more covalent.

Q.3 Define the term Ionization energy.

→ The ionization energy, also called ionization potential, in chemistry and physics, the amount of energy required to remove an electron from an isolated atom or molecule.

There is an ionization energy for each successive electron removed. The ionization energy associated with removal of the first electron, However

is most commonly used. The ionization energy of a chemical element, expressed in joules or electron volt, is usually measured in an electric discharge tube in which a fast moving electron generally by a electric current collides with a gases atom of the element causing it to eject on it is electrons generated by electric current collides with a gaseous atom of the element causing it to eject on of its electron.

it is also generally related to the nature of chemical bonding in the compounds formed by the elements, see also binding energy; electron affinity.

Tutorial No. 3

Q.1 Explain the factors affecting on ionic bond formation:

→ Lesser the ionization enthalpy, easier will be the formation of cation and easier will be the formation of ionic bond.

Larger the electron affinity, easier will be the formation of anions.

So, larger the force of attraction between the cation and anion, easier will be the ionic bond formation.

Smaller the size of the ions, lesser is the inter-nuclear distance and so greater will be the force of attraction. Hence, more will be the value of lattice energy.

Larger the lattice energy, more stable is the ionic bond.

Q.2 Write note on Born Haber cycle for NaCl.

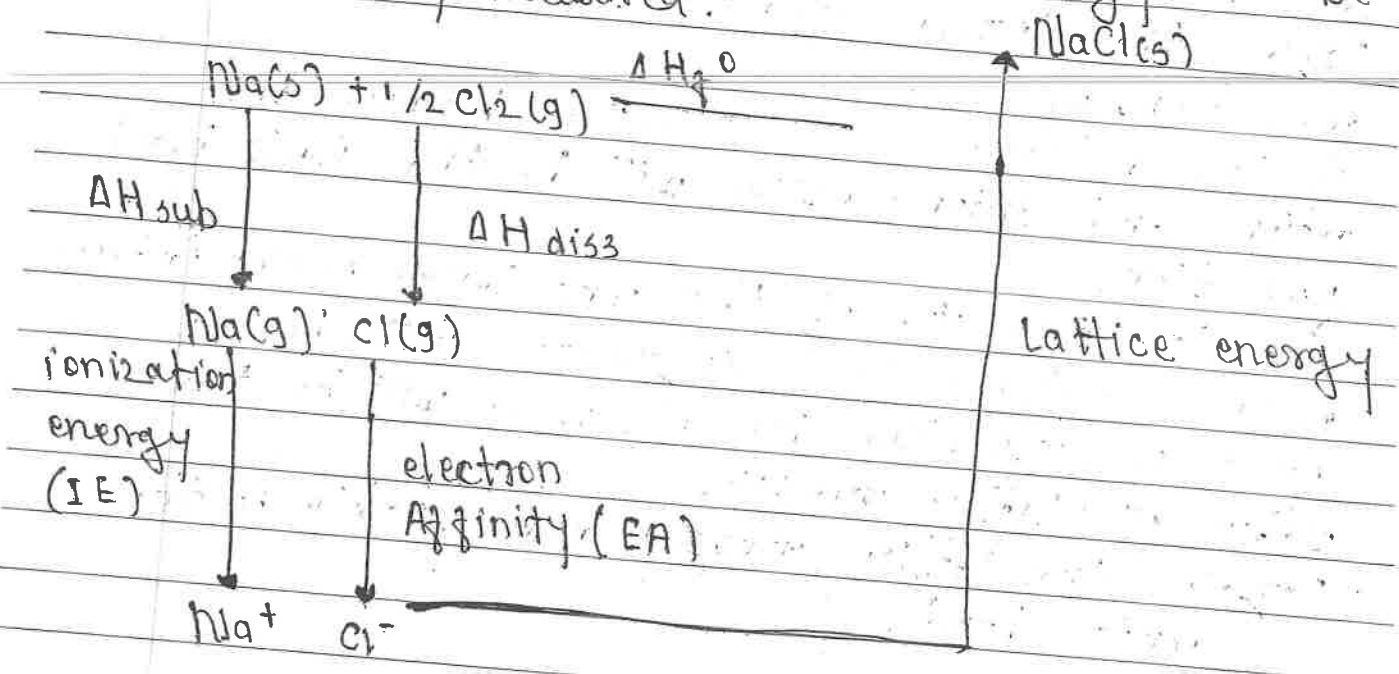

→ Born Haber cycle is a cycle of enthalpy change of process that leads to the formation of a solid crystalline ionic compound from the elemental atoms in their standard state and of the enthalpy of formation of the solid compound such that the net enthalpy becomes zero.

Born Haber cycle for NaCl -

The heat of formation of sodium chloride from sodium metal and chlorine gas can be experimentally measured.

The formation of ionic solid sodium chloride from solid sodium metal and gaseous chlorine is not a single step process but goes through several processes. Heat changes of all the processes except the lattice energy, can be mentally measured.

Q.3. Write significance of bond order.

→ Chemistry deals with the way during which subatomic particles bond together to make atoms. In molecular orbital theory, bond order plays a really important role to find bond strength and also utilized in valence bond theory.

Bond order may be a measurement of the number of electrons involved in bonds between two atoms during this article we, all discuss the concept of bond order and order formula.

Q.1. Explain the Extensive & Intensive Property?

→

a) Extensive property:-

- i) Extensive properties are physical properties that depend on the amount of matter.
- ii) This property depends on the size of the body.
- iii) The extensive properties are length, volume, weight.
- iv) This property changes the appearance of the material.

b) Intensive property:-

i) An intensive property is a property of matter that depends only on the type of matter in sample & not on the amount.

- ii) An most obvious intensive quantities are ratios of the extensive quantities.
- iii) In a homogeneous system divided into two halves, all its extensive properties, in particular its volume & its mass.

Q.2. Write the postulates of kinetic theory of gases?

→

- i) Gases consist of tiny particles (molecules or atoms.)
- ii) On average, gas molecules remain far apart from each other. Therefore, the actual volume of the gas molecules is negligible as compared to the volume of the container.
- iii) The attractive forces betⁿ the gas molecules are negligible at ordinary temperature and pressure. As a result, the gas expands to occupy the entire volume of the container.
- iv) Pressure of the gas is due to the collision of gas molecules with the walls of the container.

Q.3. Define the term Rate of reaction.

→ It is the rate of decrease in the concentration of one of the reactants or the rate of increase in the concentration of any of the product in unit time.

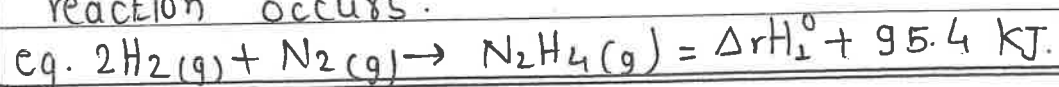

Q.1. Explain the Hess's law of constant heat summation.

→ i) Overall the enthalpy change for the reaction is equal to sum of enthalpy changes of individual steps in

ii) The enthalpy change for a chemical reaction is the same regardless of the path by which the reaction occurs

✓ iii) Hess's law is direct consequence of the fact that enthalpy is a state function.

iv) The enthalpy change of reaction depends only on the initial & final states & not on the path by which the reaction occurs.

Q.2. Write the statement of Graham's law of diffusion.

→ i) Graham's law which is popularly known as Graham's Law of Effusion, was formulated by Thomas Graham in the year 1848.

ii) Thomas Graham experimented with the effusion of gases and discovered an important feature: gas molecules that are lighter will travel faster than the heavier gas molecules.

iii) According to Graham's Law, at constant pressure & temperature, molecules or atoms with low molecular mass will effuse faster than the higher molecular mass molecules or atoms.

3. Define the term Order of Reaction.

The order or overall order of the chemical reaction is given as the sum of powers of the concentration term in the rate law expression.

* Tutorials *

1. Explain the factors affecting on rate of reaction.

i) Concentration of Reactants: When the concentrations of the reactants are raised, the reaction proceeds more quickly.

ii) Temperature of system: Raising the reaction temp. by 10°C can double or triple the reaction rate.

iii) Nature of Reactant: When solids & liquids react, increasing the surface area of the solid will increase the reaction.

iv) Presence of catalyst: Catalyst can lower the activation energy & increase the reaction rate without being consumed in the reaction.

v) Surface area: Increasing the surface area of the solid will expose more solid molecules to the liquid.

2. Write the statement of Boyle's law.

Statement of Boyle's law: For a fixed mass (number of moles 'n') of a gas at a constant temperature, the pressure (P) of the gas is inversely proportional to the volume (V) of the gas.
i.e. in equation form,

$$PV = k, \text{ a constant.}$$

q.3.

→

Define the term Entropy.

Conditions for spontaneous & non-spontaneous reaction in terms of free energy.

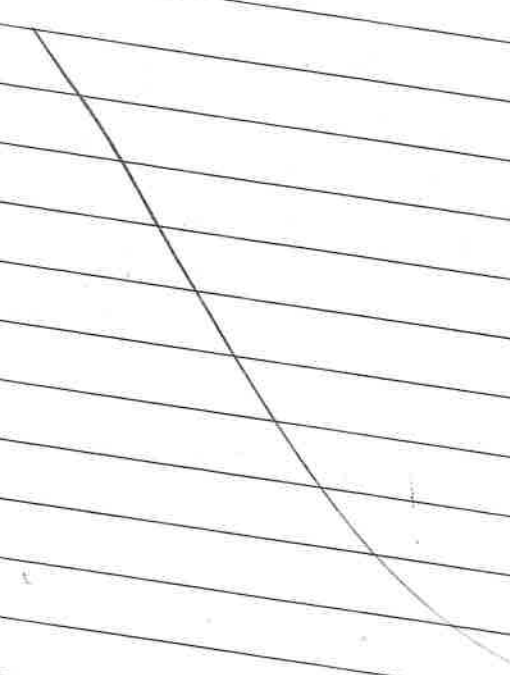

Change:

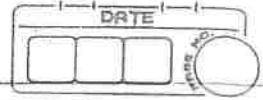

a) for a spontaneous process, $\Delta G < 0$ means the Gibbs energy of the system decreases during process.

Defⁿ:-

The property of a system which measures the degree of disorder or randomness in the system is called entropy.

Physical chemistry

① Explain the Extensive and Intensive Property?

Ans An extensive property is a property that depends on the amount of matter in a sample.

Mass and volume are examples of extensive properties.

✓ An intensive property is a properties of matter that depends only on the type of matter in a sample and not on the amount.

② Write the postulates of kinetic theory of gases?

Ans I the particles in a gas are in constant, random motion.

II the combined volume of the particles is negligible,

✓ III the particles exert no force on one another.

IV any collisions between the particles are completely elastic,

Q3) Define the term Rate of reaction.

Ans The rate of a reaction is measure of how quickly a react is used up, or a product is formed.

Q1) Explain the factors affecting on rate of reaction

Ans The chemical nature of the reacting substances, the states of subdivision (one large lump versus many small particles) of the reactants, the temperature of the reactants, the concentration of the reactants, and the presence of a catalyst.

Q2) Write the statement of Boyle's law

Ans Boyle's law states that "the absolute pressure exerted by a given mass of an ideal gas is inversely proportional to the volume it occupies of gas remain unchanged within a closed system."

3) Define the term Entropy

Ans entropy, the measure of a system's thermal energy per unit temperature that is unavailable for doing useful work. Because work is obtained from ordered molecular motion, the amount of entropy is also a measure of the molecular disorder.

Q.1.

Explain the types of Chromatography.

→

There are main four types of chromatography.

i) Adsorption Chromatography:-

In the process of adsorption chromatography different compounds are adsorbed on the adsorbent to different degrees based on the absorptivity of the component.

ii) Thin layer Chromatography:

In the process of thin-layer chromatography the mixture of substance is separated into its components of substance is help of glass plate coated with very thin layer of adsorbent.

Explain synthesis & properties of paracetamol.

i) A direct synthesis of paracetamol (acetaminophen) from hydroquinone has been developed using ammonium acetate as an amidating agent.

ii) The reaction proceeds in acetic acid at elevated temp. without any metallic catalyst.

iii) Paracetamol is a p-aminophenol derivative that exhibits analgesic & antipyretic activity.

iv) It does not possess anti-inflammatory activity. Paracetamol is thought to produce analgesia through a central inhibition of prostaglandin synthesis.

Q1) Explain the Hess's law of constant heat summation?
Ans: The law states that the change in enthalpy for a reaction is the same whether the reaction takes place in one or a series of steps. The Hess's law can also be stated as the enthalpy change for a chemical reaction is the same regardless of the path by which the reaction occurs.

Q2) Write the statement of Graham's law of diffusion.
Ans: Graham's law states that the rate of diffusion or of effusion of a gas is inversely proportional to the square root of its molecular weight.

Q3) Define the term order of reaction.

Ans The order of reaction refers to the power dependence of the rate on the concentration of each reactant. Thus, for a first order reaction, the rate is dependent on the concentration of single species.

Q1) Explain the types of chromatography

Ans If mobile phase is liquid it is termed as liquid chromatography and if it is gas then it is called gas chromatography.

Gas chromatography is applied for gases, and mixture of volatile liquids and solid material. Liquid chromatography is used especially for thermal unstable.

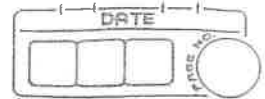

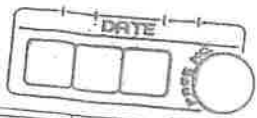

Q2) Explain synthesis and properties of Paracetamol.

Q1) Explain classification of chromatography
Ans chromatography is an analytical
technique used to separate mixture
of chemical substances into its
individual compounds. Different types
of chromatography are used in lab.
e.g. column chromatography, thin-layer
chromatography, gas chromatography
etc.

Q2) Write the properties of ideal drugs
Ans I Ideal drug should be non-toxic,
biocompatible, and biodegradable.
II Ideal drug has no side effects.
III Ideal drug shows the selectivity
in its action.
IV Rate of ideal drug release is
instantaneous and controllable.

Q3) Write raw material used in the manufacture of glass.

Ans Glass is made from natural and abundant raw materials (sand, soda ash and limestone) that are melted at very high temperature to form a new material, glass. At high temperature glass is structurally similar to liquids, however at ambient temperature it behaves like solids.

Unit Test

1. Write general characters of phylum Porifera?

- 15 ⇒
- i) They are all aquatic, mostly marine except one family spongillidae which lives in freshwater.
 - ii) They are sessile and sedentary and grow like plants.
 - iii) The body shape is vase or cylinder-like, asymmetrical, or radially symmetrical.
 - iv) The body surface is perforated by numerous pores, the ostia through which water enters the body and one or more large openings the oscula by which the water exits.
 - v) Multicellular organism with cellular level of body organization.
 - vi) Mouth absent, digestion intracellular, Excretory & respiratory organs absent.

2. Write a short note polymorphism in coelenterates?

15 ⇒ i) Phenomenon of occurrence of an individual in two or more distinct morphological and functional forms.

ii) It occurs in the same species of an individual. It is also known as genetic polymorphism.

iii) Polymorphism is an important feature of phylum coelenterata. Each individual member of coelenterates is known as zoid and they often unite to form a colony which acts as a single unit (individual).

iv) Polymorphic form in coelenterata: two types of zooids coelenterates which may be single or colonial, they exist in two forms - Polyps & medusa.

1) Polyp ⇒ In Hydrozoa, polyps have a tubular body with a mouth surrounded by tentacles at one end. Other end is blind and usually attached to a pedal disc to the substratum. Polyps are generally sessile they reproduce asexually.

2) Medusa ⇒ In Hydrozoa, medusa has a bowl or umbrella shaped body with marginal tentacles and mouth centrally located on a projection called manubrium of the lower concave surface. They are motile and reproduce sexually.

3. Write pathogenicity of Taenia solium?

15 ⇒ Pathogenicity / toxicity: Infection with an adult tapeworm is known as taeniasis and occurs only in humans, the sole definitive host. Cysticercosis is caused by the larval stage of T. solium.

Unit Test

Q.1. Give the difference between Prokaryotic and Eukaryotic cell?

| Prokaryotic cell | Eukaryotic cell |
|---|---|
| They have no nuclear membrane. Thus well defined nucleus is absent. They have nucleoid. Nucleolus is absent. They have one chromosome. No histone protein around DNA. Ribosomes are of 70s. No streaming movement of cytoplasm. E.R. is absent. Mitochondria is absent. Golgi apparatus is absent. Lysosomes are absent. | 1) They have well defined nucleus bounded by double nuclear membrane. 2) Nucleolus is present. 3) They have a number of chromosomes. 4) Histone protein is present around DNA. 5) Ribosomes are of 80s. 6) Cytoplasm exhibits streaming movements. 7) E.R. is present. 8) Mitochondria is present. 9) Golgi apparatus is present. 10) Lysosomes are present. |

Q.2. Describe the ultra-structure of Mitochondria?

- Ans ⇒ i) A mitochondrion contains two membranes with the outer layer being smooth while the inner layer is marked with folding-like structures called 'cristae'.
- ii) The inner mitochondrial membrane contains various enzymes, coenzymes, and components of multiple cycles along with pores for the transport of substrates, ATP, and Phosphate molecules.
- iii) Within the membranes is a matrix that contains various enzymes of metabolic processes like kreb's cycle.
- iv) In addition to these enzymes, mitochondria are also home to single or double stranded DNA called mtDNA that is capable of producing 10% of the proteins present in the mitochondria.

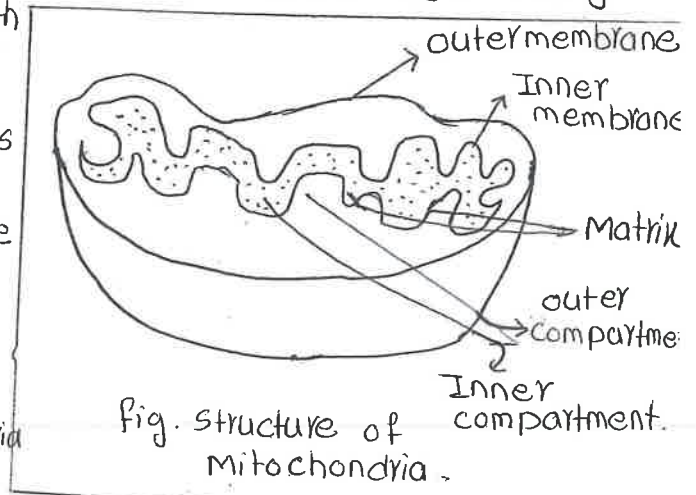

Fig. structure of mitochondria.

Q.3. Define Mitosis?

Ans ⇒ Mitosis is the process of producing two identical daughter cells by a parent cell, each daughter cell has same amount of genetic material (each daughter cell) material (same number of chromosomes) as the parent cell.

Sub :- Zoology

Q.1

Ans Defination :-

The term mutualist is used to indicate the small partners of the host are the other partners present in the mutualism.

Examples of mutualism :-

① Humans & plants :-

The human requires oxygen for life & plants use the carbon dioxide for photosynthesis. Here both human & plant are mutually benefited. Human use the oxygen given by plants in return plant use carbon dioxide, which is exhaled by the humans.

② Ants live & feed on the nectar of acacia trees. Here ants are mutualist & acacia tree is host.

The acacia tree provides home & food for the ants.

Q.2

1]

Ans General characters of fish.

1] There are over 30,000 species of fish.

2] Fish breathe through their gills.

3] Most fish don't have eyelids.

4] Fish are cold-blooded.

5] Scales help fish to swim.

6] Fish are vertebrate animals.

7] Fish are speedy.

8] Fish talk to each other.

9] Fish live in all sorts of waters.

10] Some fish are huge.

Ans

1) Yeldari -

Yeldari reservoir is on Purna, a tributary of Godavari.

2) Jayakwadi reservoir -

The 39,777 ha Jayakwadi reservoir is the largest man-made lake of Maharashtra formed by constructing a 10200 m dam across river.

3) Bhandardara reservoir -

one of the oldest reservoir in Maharashtra, Bhandardara was impounded in 1910 across the river Pravara near Bhandara.

4) Girna reservoir -

Girna reservoir is located in the arid zone of Malegaon Tahsil of Nashik district.

3]

Ans Defⁿ - Ecology :-

Ecology is the study of relationship among living organisms, including humans & their physical environment. Ecology considers organisms at the individual, population, community, ecosystem & biosphere level.

Unit Test.

Q. 1) Describe the General character of Protochordata?

Ans → Characteristics of Protochordata:

i) They are generally found in marine water.

ii) Their body is bilaterally symmetrical, triploblastic, and coelomated.

iii) At a certain stage of their lives, their body develops a long, rod-like structure for support called the notochord.

iv) They exhibit organ system level of organization.

E.g., Herdmania, Amphioxus.

Q. 2) Write a short note on Migration of fishes?

Ans → i) Fish migration is mass relocation by fish from one area or body of water to another.

ii) Many types of fish migrate on a regular basis, on time scales ranging from daily to annually or longer, and over distances ranging from a few metres to thousands of kilometres.

iii) Such migrations are usually done for better feeding or to reproduce, but in other cases the reasons are unclear.

Q. 3) Write a General character of Agnatha ?

Ans → i) In addition to the absence of jaws, modern agnathans are characterised by absence of paired fins; the presence of a notochord both in larvae and adults and seven or more paired gill pouches.

ii) Lampreys have a light sensitive pineal eye (homologous to the pineal gland in mammals).

Unit Test-II Genetics

Q.1) Define epistasis?

Ans → i) "Interaction between genes which determine a phenotype."

ii) Genetics entails a phenomena, epistasis wherein the impact of a gene mutation depends on the absence or presence of mutations in one or more other genes referred to as modifier genes.

iii) Consequently, the epistatic mutations have various effects on their own than when it occurs together.

iv) Epistasis particularly is used to indicate that the effect of gene variant gets masked by other genes.

Q.2) Describe types of chromosome on basis of centromere?

Ans → i) A chromosome is a DNA molecule that consists of a part or all of the genetic material of an organism.

ii) 4 types of chromosomes are:

1) Sub metacentric chromosomes → These are chromosomes whose centromere is present near the middle and divides the chromosome into two unequal arms.

2) Acrocentric chromosomes → These are chromosomes whose centromere is present near the end of chromosomes.

3) Telocentric chromosomes → These are chromosomes that have centromeres present at the end of chromosome

4) Metacentric chromosomes → These are chromosomes whose centromere separates the chromosome into two equally sized arms and is located in the centre of each one.
